

Caloocan, 1400 Metro Manila, Philippines

COLLEGE OF ENGINEERING Computer Engineering

2nd Semester, School Year 2024-2025

Laboratory Activity No. 3.1	
Introduction to Object-Oriented Programming	
Program: BSCPE	
Date Performed: January 31, 2025	
Date Submitted: January 31, 2025	
Instructor: Engr. Maria Rizette H. Sayo	

1. Objective(s):

This activity aims to familiarize students with the concepts of Object-Oriented Programming

2. Intended Learning Outcomes (ILOs):

The students should be able to:

- 2.1 Identify the possible attributes and methods of a given object
- 2.2 Create a class using the Python language
- 2.3 Create and modify the instances and the attributes in the instance.

3. Discussion:

AN CITY

UNIVERSITY OF CALOOCAN CITY

Caloocan, 1400 Metro Manila, Philippines

COLLEGE OF ENGINEERING Computer Engineering

2nd Semester, School Year 2024-2025

Object-Oriented Programming (OOP) is an approach to programming that views the world and systems as consisting of objects that relate and interact with each other. This involves identifying the characteristics that describe the object which are known as the Attributes of the object. Furthermore, it also deals with identifying the possible capabilities or actions that an object is able to do which are called Methods.

An object is simply composed of Attributes and Methods wherein Attributes are variables that hold the information describing the object and Methods are functions which allow the object to perform its defined capabilities/actions. A UML Class Diagram is used to formally represent the collection of Attributes and Methods.

An example is given below considering a simple banking system.

Accounts ATM

+ account number: int + serial number: int

+ account_firstname: string + account_lastname: string + current_balance: float

+ address: string + deposit(account: Accounts, amount: int) + email: string + widthdraw(account: Accounts, amount: int) + update address(new address: string) + check currentbalance(account:

Accounts) + update_email(new_email: string) + view_transactionsummary()

4. Materials and Equipment:

Desktop Computer with Anaconda Python/Python Colab Windows Operating System

5. Procedure:

Creating Classes

- 1. Create a folder named OOPIntro LastName
- 2. Create a Python file inside the **OOPIntro LastName** folder named **Accounts.py** and copy the code shown below:

ALLO NASTRALIA DE LA CALLA DEL CALLA DE LA CALLA DEL CALLA DE LA C

UNIVERSITY OF CALOOCAN CITY

Caloocan, 1400 Metro Manila, Philippines

COLLEGE OF ENGINEERING Computer Engineering

2nd Semester, School Year 2024-2025

```
1 """
     Accounts.py
3 ***
4
5 class Accounts(): # create the class
     account_number = 0
     account_firstname = ""
7
     account_lastname = ""
8
9
    current_balance = 0.0
     address = ""
10
      email = ""
11
12
    def update_address(new_address):
13
14
          Accounts.address = new_address
15
16
    def update_email(new_email):
17
          Accounts.email = new_email
```

- 3. Modify the Accounts.py and add self, before the new_address and new_email.
- 4. Create a new file named ATM.py and copy the code shown below:

```
4 ....
      ATM. py
 3 """
 4
 5 class ATM():
      serial number = 0
 8
     def deposit(self, account, amount):
 9
           account.current_balance = account.current_balance + amount
10
         print("Deposit Complete")
11
12
     def widthdraw(self, account, amount):
13
           account.current_balance = account.current_balance - amount
           print("Widthdraw Complete")
14
15
      def check_currentbalance(self, account):
15
17
           print(account.current_balance)
```

Creating Instances of Classes

5. Create a new file named main.py and copy the code shown below:

Caloocan, 1400 Metro Manila, Philippines

COLLEGE OF ENGINEERING Computer Engineering

2nd Semester, School Year 2024-2025

```
main.py
 4 import Accounts
 6 Account1 = Accounts.Accounts() # create the instance/object
 8 print("Account 1")
 9 Account1.account_firstname = "Royce"
10 Account1.account lastname = "Chua"
11 Account1.current_balance = 1000
12 Account1.address = "Silver Street Quezon City"
13 Account1.email = "roycechua123@gmail.com"
15 print(Account1.account_firstname)
16 print(Account1.account_lastname)
17 print(Account1.current_balance)
18 print(Account1.address)
19 print(Account1.email)
20
21 print()
22
23 Account2 = Accounts.Accounts()
24 Account2.account_firstname = "John"
25 Account2.account_lastname = "Doe"
26 Account2.current_balance = 2000
27 Account2.address = "Gold Street Quezon City"
28 Account2.email = "johndoe@yahoo.com"
30 print("Account 2")
31 print(Account2.account_firstname)
32 print(Account2.account lastname)
33 print(Account2.current_balance)
34 print(Account2.address)
35 print(Account2.email)
```

6.

Caloocan, 1400 Metro Manila, Philippines

COLLEGE OF ENGINEERING Computer Engineering

2nd Semester, School Year 2024-2025

Run the main.py program and observe the output. Observe the variables names account_firstname, account_lastname as well as other variables being used in the Account1 and Account2. 7. Modify the main.py program and add the code underlined in red.

```
"""
2    main.py
3    """
4 import Accounts
5 import ATM
6
7 Account1 = Accounts.Accounts() # create the instance/object
8
9 print("Account 1")
10 Account1.account_firstname = "Royce"
11 Account1.account_lastname = "Chua"
12 Account1.current_balance = 1000
13 Account1.address = "Silver Street Quezon City"
14 Account1.email = "roycechual23@gmail.com"
15
```

8. Modify the main.py program and add the code below line 38.

UNIVERSITE OF THE PROPERTY OF

UNIVERSITY OF CALOOCAN CITY

Caloocan, 1400 Metro Manila, Philippines

COLLEGE OF ENGINEERING Computer Engineering

2nd Semester, School Year 2024-2025

```
31 print("Account 2")
32 print(Account2.account_firstname)
33 print(Account2.account_lastname)
34 print(Account2.current_balance)
35 print(Account2.address)
36 print(Account2.email)
37
38 creating and Using an ATM object
39 ATM1 = ATM.ATM()
40 ATM1.deposit(Account1,500)
41 ATM1.check_currentbalance(Account1)
42
43 ATM1.deposit(Account2,300)
44 ATM1.check_currentbalance(Account2)
45
```

9. Run the main.py program.

Create the Constructor in each Class

Modify the Accounts.py with the following code:
 Reminder: def init (): is also known as the constructor class

```
Accounts.py
 5 class Accounts(): # create the class
     def __init__(self, account_number, account_firstname, account_lastname,
 7
                   current_balance, address, email):
8
          self.account_number = account_number
9
        self.account_firstname = account_firstname
        self.account_lastname = account_lastname
10
          self.current_balance = current_balance
11
        self.address = address
12
13
        self.email = email
14
15
     def update_address(self,new_address):
          self.address = new_address
16
17
      def update_email(self,new_email):
18
19
          self.email = new_email
                                                                              2. Modify the
```

main.py and change the following codes with the red line. Do not remove the other codes in the program.

      25
3. Run the main.py program again and run the output.
```

6. Supplementary Activity:

NA WAY

UNIVERSITY OF CALOOCAN CITY

Caloocan, 1400 Metro Manila, Philippines

COLLEGE OF ENGINEERING Computer Engineering

2nd Semester, School Year 2024-2025

Tasks

- 1. Modify the ATM.py program and add the constructor function.
- 2. Modify the main.py program and initialize the ATM machine with any integer serial number combination and display the serial number at the end of the program.
- 3. Modify the ATM.py program and add the **view_transactionsummary()** method. The method should display all the transaction made in the ATM object.

Questions

1. What is a class in Object-Oriented Programming?

PLEASE REFER TO THIS LINK FOR MY ANSWER:

https://colab.research.google.com/drive/1bClH81LMN7kxppwDQRMY5MygX5BRlHbG#scrollTo=T5fw5 MJf9h-i&line=2&uniqifier=1

2. Why do you think classes are being implemented in certain programs while some are sequential(line-by-line)?

PLEASE REFER TO THIS LINK FOR MY ANSWER:

https://colab.research.google.com/drive/1bClH81LMN7kxppwDQRMY5MygX5BRlHbG#scrollTo=JCQ5Y -w2_vlk&line=2&uniqifier=1

3. How is it that there are variables of the same name such account_firstname and account_lastname that exist but have different values?

PLEASE REFER TO THIS LINK FOR MY ANSWER:

https://colab.research.google.com/drive/1bClH81LMN7kxppwDQRMY5MygX5BRlHbG# scrollTo=Dky6zxb7_xUL&line=3&uniqifier=1

4. Explain the constructor functions role in initializing the attributes of the class? When does the Constructor function execute or when is the constructor function called?

PLEASE REFER TO THIS LINK FOR MY ANSWER:

https://colab.research.google.com/drive/1bClH81LMN7kxppwDQRMY5MygX5BRlHbG# scrollTo=u8gucEVM_zBl&line=3&uniqifier=1

Caloocan, 1400 Metro Manila, Philippines

COLLEGE OF ENGINEERING Computer Engineering

2nd Semester, School Year 2024-2025

5. Explain the benefits of using Constructors over initializing the variables one by one in the main program?

PLEASE REFER TO THIS LINK FOR MY ANSWER:

https://colab.research.google.com/drive/1bClH81LMN7kxppwDQRMY5MygX5BRlHb G#scrollTo=P3GuDlaV_0iN&line=1&uniqifier=1

7. Conclusion:

PLEASE REFER TO THIS LINK FOR MY ANSWER:
